Attachments: Fuel Water Level Hotel Pier 20210625.xlsx

Some fuel water levels from Hotel Pier release.

In January pressure testing, F-24 failed the first day and then past the second day.

The wells were lasted pumped two days prior to these measurements.

Seems most of the fuel is being recovered on the land now, but the quantities have drastically dropped from 3-4 months ago.

The measurements were during low tide, after full moon with this months maximum tidal influence.

The VOC in the K111 utility man hole was around 500 ppm back in December.

So progress is being made.

The fuel level highest are around F-24 low points so we're still monitoring the data and tracking this release/response actions.

vr,
Hugh

I just sent you what Donald sent me. It is fairly sparce.

Interesting info on LCDR Bencs. This is atypical.

Steve,

Can you forward me the DOD org chart.

FYSU, as of a couple weeks ago, LCDR Bencs has been re-assigned.

Per my conv with CDR Frame, Bencs replacement not in yet.

Cheers,

Hugh
